

ENVIRONMENTAL PEST MANAGEMENT

Date: _____

On _____ Environmental Pest Management will treat your unit for ***ants in the form of a wall void injection.*** Regardless of your infestation level, it is VITAL for an effective treatment that you prepare your unit for service. You will need to do your part by:

1. turning off any alarm system(s);
2. leaving the **front** door **UNCHAINED**;
3. removing ALL items from kitchen and bathroom **countertops**;
4. Ensure all open food or open food containers are put away or sealed
5. If able, pulling refrigerator and stove away from wall 12 to 18 inches;
6. If able, moving items &/or furniture away from all walls 12 to 18 inches;
7. removing all pets from areas to be treated;
(Aquarium aerators should be turned off and aquarium covered with plastic)
8. vacating the unit for a minimum of 3 hours after treatment;

If any of these directions are not followed, there can be no warranty given and/or your unit may not be treated. **We cannot start service in your home until your home is vacated.**

This treatment requires drilling into the studs to apply chemical directly into the wall void, some dust may be leftover from the drilling.

Please take note: For 7 to 10 days following the treatment you may notice an increase in pest activity. If this occurs do not be concerned. This is a result of the treatment driving the pests out of their nesting areas. The pests need to come in contact with the treatment to get a lethal dose and be killed.
