

ENVIRONMENTAL PEST MANAGEMENT

Date: _____

On _____ Environmental Pest Management will treat your unit for *cockroaches in the form of a wall void injection*. Regardless of your infestation level, it is VITAL for an effective treatment that you prepare your unit for service. You will need to do your part by:

1. Turn off any alarm system(s)
2. Leaving the **front** door UNCHAINED
3. Removing ALL items from kitchen and bathroom **countertops**
4. **removing ALL items from ALL kitchen and bathroom cabinets.**
5. Ensure all open food and/or open food containers are put away/sealed
6. Cover kitchen items from cabinets with sheet if possible
7. Pull refrigerator and stove away from wall 12 to 18 inches
8. Move items &/or furniture 12 to 18 inches away from walls in all rooms
9. Remove all pets from areas to be treated
(Aquarium aerators should be turned off and aquarium covered with plastic)
10. Vacating the unit for a minimum of 3 hours after treatment

If **any** of these directions are not followed, there can be no warranty given and/or your unit may not be treated. **We cannot start service in your home until your home is vacated.**

This treatment requires drilling into the studs to apply chemical directly into the wall void, some dust may be leftover from the drilling.

Please take note: For 7 to 10 days following the treatment you may notice an increase in pest activity. **If this occurs do not be concerned.** This is a result of the treatment driving the pests out of their nesting areas. The pests need to come in contact with the treatment to get a lethal dose and be killed.
